

World of Warcraft Profile APIs

The World of Warcraft profile APIs listed below encompass profile game data. For more information about profile game data, see [World of Warcraft Namespaces](#).

Host Names

For all regions except China, the API host name follows the format `{region}.api.blizzard.com` , where `{region}` is one of `us` | `eu` | `kr` | `tw`. For China, the host name is `gateway.battlenet.com.cn` . For more information, see [Regionality and APIs](#).

Namespaces

The World of Warcraft profile APIs require a namespace as part of every request. Each endpoint below lists the correct namespace to use as a parameter. A namespace can be submitted as a header (`Battlenet-Namespace: {namespace}`) or as a query parameter (`?namespace={namespace}`). For more information, see [World of Warcraft Namespaces](#).

APIs

World of Warcraft supports the following profile APIs. For information about using the APIs, see [Getting Started](#).

Account Profile API

Collapse All

GET

Account Profile Summary

/profile/user/wow

^

Returns a profile summary for an account.

Because this endpoint provides data about the current logged-in user's World of Warcraft account, it requires an access token with the **wow.profile** scope acquired via the [Authorization Code Flow](#).

Parameter	Type	Value	Description
:region	string <i>REQUIRED</i>	us	The region of the data to retrieve.
namespace	string <i>REQUIRED</i>	profile-us	The namespace to use to locate this document.
locale	string	en_US	The locale to reflect in localized data.

Clear Results

GET

Protected Character Profile Summary

/profile/user/wow/protected-character/{realmId}-{characterId}

^

Returns a protected profile summary for a character.

Documentation

Parameter	Type	Value	Description
:region	string <i>REQUIRED</i>	us	The region of the data to retrieve.
{realmId}	integer <i>REQUIRED</i>	1	The ID of the character's realm.
{characterId}	integer <i>REQUIRED</i>	12345	The ID of the character.
namespace	string <i>REQUIRED</i>	profile-us	The namespace to use to locate this document.
locale	string	en_US	The locale to reflect in localized data.

GET

Account Collections Index
/profile/user/wow/collections

^

Returns an index of collection types for an account.

Because this endpoint provides data about the current logged-in user's World of Warcraft account, it requires an access token with the **wow.profile** scope acquired via the [Authorization Code Flow](#).

Parameter	Type	Value	Description
:region	string <i>REQUIRED</i>	us	The region of the data to retrieve.
namespace	string <i>REQUIRED</i>	profile-us	The namespace to use to locate this document.
locale	string	en_US	The locale to reflect in localized data.

locale	string	en_US	The locale to reflect in localized data.

GET

Character Profile Status

/profile/wow/character/{realmSlug}/{characterName}/status

Returns the status and a unique ID for a character. A client should delete information about a character from their application if any of the following conditions occur:

- an HTTP 404 Not Found error is returned
- the is_valid value is false
- the returned character ID doesn't match the previously recorded value for the character

The following example illustrates how to use this endpoint:

1. A client requests and stores information about a character, including its unique character ID and the timestamp of the request.
2. After 30 days, the client makes a request to the status endpoint to verify if the character information is still valid.
3. If character cannot be found, is not valid, or the characters IDs do not match, the client removes the information from their application.
4. If the character is valid and the character IDs match, the client retains the data for another 30 days.

Parameter	Type	Value	Description
:region	string <i>REQUIRED</i>	us	The region of the data to retrieve.
{realmSlug}	string <i>REQUIRED</i>	tichondrius	The slug of the realm.
{characterName}	string <i>REQUIRED</i>	charactername	The lowercase name of the character.
