

World of Warcraft Game Data APIs

The World of Warcraft game data APIs encompass both static and dynamic game data. For more information about static and dynamic game data, see [World of Warcraft Namespaces](#).

Host Names

For all regions except China, the API host name follows the format `{region}.api.blizzard.com` , where `{region}` is one of `us` | `eu` | `kr` | `tw`. For China, the host name is `gateway.battlenet.com.cn` . For more information, see [Regionality and APIs](#).

Namespaces

The World of Warcraft game data APIs require a namespace as part of every request. Each endpoint below lists the correct namespace to use as a parameter. A namespace can be submitted as a header (`Battlenet-namespace: {namespace}`) or as a query parameter (`?namespace={namespace}`). For more information, see [World of Warcraft Namespaces](#).

Search

Certain data types in the World of Warcraft game data APIs support search. See [Search](#) for more information.

APIs

World of Warcraft supports the following game data APIs. For information about using the APIs, see [Getting Started](#).

Achievement API

Collapse All

GET

Achievements Index
`/data/wow/achievement/index`

^

Returns an index of achievements.

Parameter	Type	Value	Description
:region	string <i>REQUIRED</i>	us	The region of the data to retrieve.
namespace	string <i>REQUIRED</i>	static-us	The namespace to use to locate this document.
locale	string	en_US	The locale to reflect in localized data.

Try It

GET

Achievement Categories Index

/data/wow/achievement-category/index

Returns an index of achievement categories.

Parameter	Type	Value	Description
:region	string <i>REQUIRED</i>	us	The region of the data to retrieve.
namespace	string <i>REQUIRED</i>	static-us	The namespace to use to locate this document.
locale	string	en_US	The locale to reflect in localized data.

Try It

Clear Results

GET

Achievement Category

/data/wow/achievement-category/{achievementCategoryId}

Documentation

returns an achievement category by ID.

Parameter	Type	Value	Description
:region	string <i>REQUIRED</i>	us	The region of the data to retrieve.
{achievementCategoryId}	integer <i>REQUIRED</i>	81	The ID of the achievement category.
namespace	string <i>REQUIRED</i>	static-us	The namespace to use to locate this document.
locale	string	en_US	The locale to reflect in localized data.

Auction House API

Collapse All

GET

Auctions

/data/wow/connected-realm/{connectedRealmId}/auctions

Returns all active auctions for a connected realm.

See the **Connected Realm API** for information about retrieving a list of connected realm IDs.

Auction house data updates at a set interval. The value was initially set at 1 hour; however, it might change over time without notice.

Depending on the number of active auctions on the specified connected realm, the response from this endpoint may be rather large, sometimes exceeding 10 MB.

Parameter	Type	Value	Description
:region	string <i>REQUIRED</i>	us	The region of the data to retrieve.
{connectedRealmId}	integer <i>REQUIRED</i>	1146	The ID of the connected realm.
namespace	string <i>REQUIRED</i>	dynamic-us	The namespace to use to locate this document.
locale	string	en_US	The locale to reflect in localized data.

Try It
